Dear Valued Customer,

This letter is just a reminder that the dreaded time of year has almost arrived where we say goodbye to our lakes and fine finned friends. Unless you are an ice fisherman or sail to warmer waters, you will have to winterize and store all your equipment. But before you do, please make sure you take the necessary precautions to make sure that you will be off to a running start next spring.

Care of your new outboard motor is very crucial. We are now booking our winterizing of outboard motors so please call us to book your appointment. Our winterizing packages include:

2 Stroke Engine

Unit oil change and fogging the engine, oil disposal, remove and reinstall the prop, remove fishing line, greasing of the spline and fittings and check for potential startup problems

4 Stroke Engine

Lower unit oil change, crankcase oil change, oil disposal, fogging the engine, remove and reinstall the prop, remove fishing line, greasing of spline and fittings and check for potential startup problems

Also, if your engine has reached 20 hours of use and has not had a 20 hour inspection now is a good time to have this service performed. It is an essential service as checks are made to make sure your engine is running correctly after the break-in period.
